

Constructed Wetland Association 15th Annual Conference
“Constructed Wetlands for Nutrient Control”
4th & 5th October 2023
Cranfield University, UK

CALL FOR SPEAKERS – DEADLINE 24th July 2023

After a long break in our face-to-face events, we are delighted to have the upcoming conference hosted by Cranfield University (UK), who do innovative research on nature-based solutions including a pilot wetland research facility within their own sewage treatment works. This year's conference cannot come at a better time, with so much currently being done on the use of treatment wetlands for nutrient management, combined sewer overflows, sustainable drainage systems, catchment management and more!

We are inviting contributions from the wetland community to present the latest case studies and research on the main conference topics:

- Wetlands for nutrient management in urban and rural environments
- Farm wetlands and catchment-based interventions
- Delivering multiple co-benefits with constructed wetlands
- Innovations in wetland design and applications
- Resource recovery and circular economy

Though we will consider any paper that will advance the science or application of constructed wetlands.

We welcome contributions that are supported by data (i.e., no commercial pitches please!) to enable inspiring discussions in a friendly environment. If you have new research or case studies that you would like to share, please send your submission to info@constructedwetland.co.uk.

Please include the following information:

- Speaker(s) name, job title and organisation.
- Title of your contribution
- A brief summary of the scope of your presentation and key learning points (150 words).
- If you prefer a poster or oral presentation

More information about the event, including registration details can be found at

www.cranfield.ac.uk/wetlands2023

We hope to see you in October!

Best wishes,

The CWA Committee
