

## **GFIL Future Frontiers Fund (FFF)**

### **Core application questions**

Please visit [GFIL FFF](#) for more information **and to apply** (this is not the application form).

Applications will be completed online (and drafts can be saved online), but if you would like to prepare your proposal in advance, the core questions will be:

- What is your novel idea, technology, product or service that address challenges related to tackling climate change, protecting our environment and delivering a net zero future? Please include an assessment of your current TRL. (Max 300 words).
- Briefly describe the potential impacts achievable from the concept and how you anticipate reaching full-scale rollout in the future. (Max 300 words).
- Briefly describe the key questions you need to answer in order to demonstrate a successful proof of concept. Include how you propose to use the FFF award to address these questions, and what outcomes you anticipate from this project. Please explain why you are unable to carry out this work using alternative resources. (Max 500 words).
- Please upload a Gantt chart to show activities and milestones. Note that the maximum project duration is six months, but shorter project timeframes (from 3 months) are also welcome.
- Please justify the resources required to undertake the project, taking into account the nature and complexity of the proposal. (Max 200 words).

Applications will be evaluated on the basis of:

- Alignment with TRLs 1-3.
- Relevance to scope: the generation and development of fresh and highly novel ideas, technologies, products and services that address challenges related to tackling climate change, protecting our environment and delivering a net zero future.
- Impact: potential impacts achievable from the concept and how it might be scaled up in the future.
- Feasibility of project plan: an understanding of the key questions needed to demonstrate a successful proof of concept, and a viable project plan to address these in the time available, and with the resources requested.

- Value for money.

In addition, we will take a portfolio approach, in order to ensure a breadth of solutions are supported.
