

Grant Jamieson

Managing Director of Winkworth Machinery

Grant is Managing Director of Winkworth Machinery, the leading UK designer and manufacturer and worldwide exporter of industrial mixing machinery across all sectors.

Starting his career at the Royal Aircraft Establishment in Farnborough, Grant developed considerable expertise in precision engineering and a strong foundation in engineering principles. Building on these skills, Grant completed an Engineering with Business Studies degree followed by a post graduate Diploma in Management Studies.

Subsequent roles in the technical / production engineering field led to a natural progression into production management and then Board for a high technology global subsea acoustic instrumentation company.

Returning to precision engineering, Grant took charge as Managing Director of a privately owned sub contract fabrication engineering business which during his 5 year tenure saw significant growth before being invited to join Winkworth in 2008 as Managing Director and shareholder.

Winkworth have been designing and manufacturing industrial mixers and blenders since 1924 and has a long history in mixing applications and processes. Located in state-of-the-art facilities in Basingstoke. Each machine is application led, a bespoke design produced and manufactured to the customer specific requirements before supply worldwide.

Grant is also the Chairman of the Processing and Packaging Manufacturing Association (PPMA) which represents over 400 member companies and promotes sales of machinery both in the UK and internationally.

"As a major exporter with over 50% exports, internationalisation poses a challenge and opportunity. Winkworth is a generic term for an industrial mixer in the UK, developing and maximising that brand heritage outside the UK is where major growth can occur. The UK's market is the tip of the iceberg when considering a world stage. Reaching new clients with competent representation would fast track our growth." said Grant.
