

National Manufacturing Debate 2020

Wednesday 2 December

Ben Peace
Head of Manufacturing, KTN

Ben heads up the manufacturing team at KTN, which has a mission to help industry make things better...and make better things. We help the UK manufacturing sector to grow more productive, resilient and successful thanks to the connections we make - to the great ideas, creativity and research that our country is famous for.

We are a small team with a big remit. We fulfil this by driving connectivity across our sector- and technology-focused teams, activities and outreach, joining these communities up for mutual benefit.

KTN also has a strategic role building new communities that tackle challenges and opportunities, and shaping and supporting funding and support initiatives such as the Made Smarter Industrial Strategy Challenge Fund.

Ben has a background in product design and engineering. After ten years in industry (fuel cells, solar panels, zero emission vehicles etc.) and consultancy, Ben joined the Environmental Sustainability KTN back in 2011. Particular interests include circular economy, remanufacturing, Industry 4.0, design, business model innovation, and tools.
